DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4-9, 12-15, 19 and 21-31 are rejected under 35 U.S.C. 102(e) as being anticipated by Weber et al..

Weber et al. discloses a data sensing circuit for a magnetic memory cell and a method of sensing data stored in a magnetic memory cell having all the elements and steps as recited in claims 1, 2, 4-9, 12-15, 19 and 21-31 as follows:

- a current source circuit (transistors 34 and 35 and switches 24 and 27, Fig. 3) that selectively supplies a current to the magnetic cell;
- a first storage device (capacitor 25, Fig. 3 and column 10, lines 20-26) selectively coupled to the magnetic memory cell that is configured to store a voltage representing a state of the magnetic cell;
- a second storage device (capacitor 28, Fig. 3);
- a differential voltage sense circuit (comparator 21, Fig. 3); and

- a control circuit that generates control signals (switches 24, 27, 29 and 30) to control the current source to supply current to the magnetic memory cell and to control the coupling of the first and second storage devices to the magnetic memory cell.

Allowable Subject Matter

3. Claim 32 is allowed.
4. Claims 3, 10, 11, 16-18 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 3, 10, 11, 16-18, 20 and 32 recite the detailed current source circuit that is not found in the prior art.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Baker discloses a noise resistant small signal sensing circuit for a memory device.

Cernea et al. discloses a non-volatile memory with improved sensing and method therefor.
